Judson Culter, CEO at Rover Metals, states “we are developing a lithium mining project in Nevada that has the potential to help fill-in the major supply shortage coming for lithium beginning in H2-2026. Development of critical mineral projects here in North America is a matter of national security. Mining stocks and the mining sector need to get a second look from domestic investors right now given the global geopolitical climate we’re living in. We welcome due diligence calls on our mining resource development projects. Companies like Rover are subject to naked-short selling and potential malicious trading practises that can be orchestrated by hostile foreign regimes. Rover relies on the support of domestic investors to help sustain uninterrupted development of its resource projects. China’s battery companies are targeting Europe and are forecasted to account for approximately 30% of Europe’s battery production by 2030*.”*
